

License Page for Flutter Apps

What I Expected

"I am going to have to manually add a bunch of widgets to get a license page"

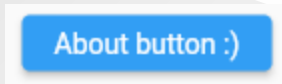

What happened

1. It is REALLY simple, the framework has widgets and functions to do it for you.

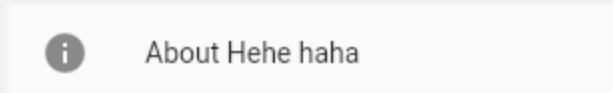

How to do it

Decide on which of the two simple way you want to use:

- The `showLicensePage()` and/or `showAboutDialog()` functions.

- The `AboutListTile` class.

The function

```
child: ElevatedButton(  
  child: const Text('About this app'),  
  onPressed: () {  
    showAboutDialog(  
      context: context,  
      applicationIcon: const FlutterLogo(),  
      applicationName: 'Hehe haha',  
      applicationVersion: 'January 1970',  
      applicationLegalese: '\u{a9} 2000 Jane Doe',  
      children: aboutBoxChildren, // Add more widgets to the modal!  
    );  
  },  
),
```

The class

```
drawer: Drawer(  
  child: SingleChildScrollView(  
    child: SafeArea(  
      child: AboutListTile(  
        icon: const Icon(Icons.info),  
        applicationIcon: const FlutterLogo(),  
        applicationName: 'Hehe haha',  
        applicationVersion: 'January 1970',  
        applicationLegalese: '\u{a9} 2000 Jane Doe',  
        aboutBoxChildren: aboutBoxChildren,  
      ),  
    ),  
  ),  
)
```

Result
